The theory of nonlinear systems with parallel linear system theory. corresponding to. but more general. Non-linear system theory to establish the state space analysis method based on the use of mathematical tools of differential geometry. Differential geometry method has been proved to be effective and powerful tool for the analysis and design of nonlinear systems. The book is easy-to-digest. the concept is clear. rigorous theory. the appropriate depth. a relatively complete system. focused on the systematic introduction to the basic theory. but also take into account the practical application. The latter part of the book. from the practical point of view of engineering. in-depth. carefully analyzed some versatility instance. including motor systems. single and multi-machine power system. robotic systems. aircraft systems (submersible and underwater robot system) . This book is for graduate students with the theory of nonlinear geometric primer. mainly for early readers involved in the field of non-linear theory to provide a theoretical basis for the further enhancement and in-depth study. The book as a doctoral student and graduate of related disciplines of engineering colleges teaching materials are also available for the reference of the related disciplines of science and technology workers.Four Satisfaction guaranteed,or money back.
