## Bastadins and Related Compounds from the Marine Sponges *Ianthella basta* and *Callyspongia* sp:

By Sofia Ortlepp

Cuvillier Verlag Jun 2008, 2008. Taschenbuch. Condition: Neu. Neuware - Sponges are soft bodied and sessile animals, which lack spine and shell (Armstrong & Quigley 1999). For their defence against fouling organisms, predators, and neighbours competing for space, sponges rely on bioactive natural products instead (Proksch et al. 2002). In this project the marine sponge *Ianthella basta* Oken, 1815, belonging to the order Verongida Bergquist, 1978, was investigated. Species of the order Verongida are biochemically characterised by the production of brominated tyrosine derivatives. (Bergquist & Cook 2002) Several bastadins and a brominated phenyl acetic acid were isolated. One other sponge was investigated too, *Callyspongia* 'blue', which yielded a brominated diphenyl ether (compound 5). Bastadins are characteristic secondary metabolites of the sponge *I. basta*. They are tyrosine-derived, brominated, oxime-bearing macro bis-diaryl ether tetrapeptides, which can be either cyclic or linear. 36 bastadin and hemibastadin derivatives are known; additional to these one new congener named bastadin-24 was isolated during this work. The bastadins do not only inhibit barnacle larval settlement, thrombocyte aggregation, display cytotoxicity, inhibit bacterial growth as well as protein kinases, as described in this thesis, but do also show for example antagonistic effects on the ryanodin receptor and calcium channels in the...

### Reviews

*A superior quality publication and the font utilized was intriguing to read. I could comprehend every little thing using this composed e publication. You will like the way the author compose this publication.*

-- **Mr. Demario Trantow**

*This published pdf is wonderful. it was written really completely and valuable. I found out this book from my dad and i recommended this pdf to find out.*
